How to install your  
floating shelf

## Material Kit

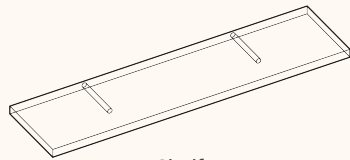

Concealed Shelf Brackets

Wall Plugs

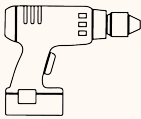

Washers

Shelf

## You'll need ...

Drill

10mm  
Drill Bit

Spanner

Hammer

Pencil

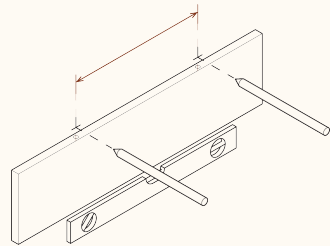

Spirit Level  
(a phone app works too)

## Steps

### 1. Mark drilling positions

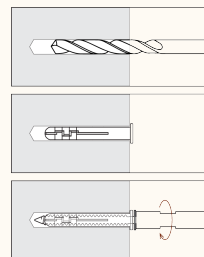

**Tip:** Before you start, check whether the wall is a stud or solid wall, and locate the studs if required.

Measure the distance between the holes, then use a spirit level and pencil to mark the drilling positions on the wall.

### 2. Install concealed shelf brackets

- Drill 75 mm-deep holes at the marked positions using a 10mm drill bit.
- Clean out the drilled holes, then tap the wall plugs firmly into place with a hammer.
- Place the washers onto the brackets, then use a spanner to tighten the screws into the wall plugs.

### 3. Install the shelf

Align the holes in the shelf with the brackets, then slide the shelf into place or gently tap it with a rubber hammer if necessary.

Your floating shelf is now ready to use!
