How to install your
wall shelf

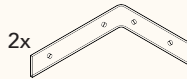

Material Kit

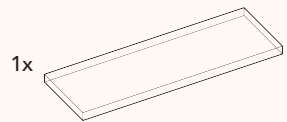

Wall Plugs 50mm Screws

19mm Screws

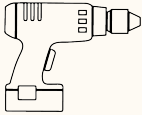

Metal Brackets

Shelf

You'll need ...

Drill

6mm
Drill Bit

Screw
Driver

Hammer

Pencil

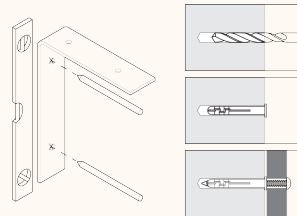

Spirit Level
(a phone app works too)

Steps

1. Install one bracket to the wall

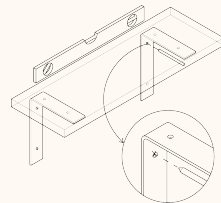

Tip: Before you start, check whether the wall is a stud or solid wall, and locate the studs if required.

- Use a spirit level to align the brackets vertically and mark the hole positions with a pencil.
- Drill 50 mm-deep holes using a 6mm drill bit.
- Clean out the drilled holes, then tap the wall plugs firmly into place with a hammer.
- Secure the bracket with 50mm screws.

2. Check level and spacing

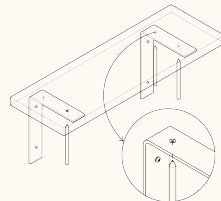

- Position the second bracket vertically against the wall and rest the shelf across both brackets. Use a spirit level to check the brackets are level and correctly spaced to suit the shelf.
- Mark the top fixing hole with a pencil, then install the second bracket to the wall following Step 1.

3. Position the shelf

Place the shelf onto the mounted brackets and mark the hole positions with a pencil.

Check that you are satisfied with the position before proceeding.

4. Secure the shelf

Secure the shelf to each bracket through the fixing holes using 19 mm screws, holding the shelf firmly as you screw them in.

Your wall shelf is now ready to use!
